Production	Jan 2024, in Korea	Feb 2024, on Global

Detail

- Using UltraWide Cam
- Analyzing Gait Video with locally (Not using the network)
- Recommend import on the iPad Pro series

Usage

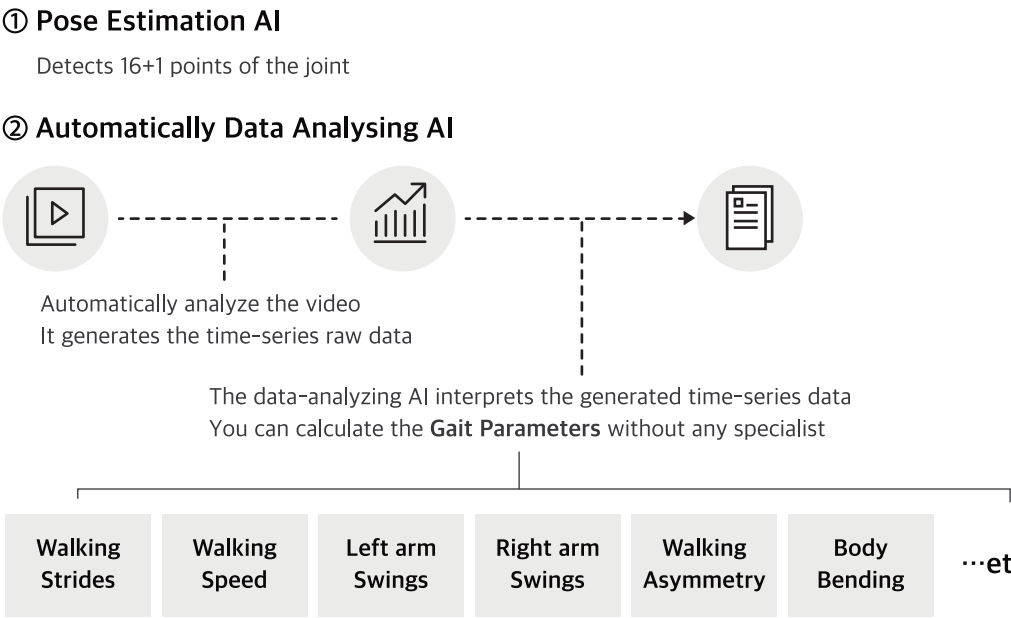

- ### ① AI Walking Analysis

It detects health abnormalities by analyzing the user's stride, speed, upper body bending, and walking asymmetry with a one-minute walking test.
- ### ② Digital Self-Diagnosis

It diagnoses walking-related diseases such as Parkinson's disease, sarcopenia, and arthritis through a five-minute self-examination and quickly guides you to the hospital.
